In the 1950s, and acts by blocking the Clostridium Botulinum, botulinum toxin-A, it is one of three brands of the term for all formulations of botulinum toxin that can be used in a medical environment.

The “li need for a specific condition” has been since used to treat conditions that are not aesthetic in nature, such as strabismus (misalignment of the eyes), cervical dystonia (abnormal movements of the neck), and upper limb spasticity (uncontrolled movements of the arms and hands). By 1978 ophthalmologist Dr Alan Sco...
